IFI CLAIMS Patent Services Licenses Global Patent Data to Gridlogics

Agreement gives Gridlogics' vast international customer base access to the highest quality global patent data

MADISON, Conn., Dec. 10, 2012 — [IFI CLAIMS Patent Services](#), the leading producer of global patent databases, analytic solutions and innovative web services, today announced that it has licensed the CLAIMS® Global patent database to Gridlogics, an India-based intellectual properties solutions provider with customers all over the world. Under the agreement, IFI CLAIMS global data will be accessible from the Gridlogics PatSeer™ patent search and analysis platform, giving its customers access to high quality, integrated patent data.

The IFI CLAIMS Global patent database contains a comprehensive international patent collection. Coverage spans more than 90 countries in North America, Europe and Asia including the U.S., Canada, Germany, Spain, Japan, China, South Korea and patents covered by the European Patent Office and World Intellectual Property Organization (WIPO). This state-of-the-art database is normalized and curated by IFI to provide unprecedented consistency and quality.

Under the agreement, Gridlogics accesses the CLAIMS Global database via CLAIMS Direct, IFI's web-based API. PatSeer is Gridlogics' web-based patent research platform that combines global patent data coverage with powerful patent search, analysis, project management and collaboration capabilities.

"The CLAIMS Direct platform makes it easy for us to integrate global patent data into our products and services," said Manish Sinha, Chief Technology Officer, Gridlogics. "IFI provides a dynamic data repository that serves as both a data source and reference."

"We are excited that Gridlogics has chosen IFI CLAIMS as a patent data supplier," said Mike Baycroft, CEO, IFI CLAIMS Patent Services. "By licensing CLAIMS Direct, Gridlogics takes advantage of IFI's tradition of patent data quality and innovative data products."

IFI CLAIMS Patent Services has been processing, interpreting and indexing patent data since 1955. In that time, it has developed a variety of proprietary processes and data management skills that allow it to keep pace with the constantly changing patent data landscape produced by the world's patent offices.
